

## **BEN AVERY USER CARDS: YELLOW CARDS**

Level 2 and higher should get a free Yellow card at the facility office located west across the parking lot from the main range cashier. *(There is no charge for this card)*. This card permits the holder to practice and to host shooters who do not have a yellow card. It is a safety requirement to ensure there is always at least one experienced mounted shooter on hand. AGFD is very concerned with liability and this is a common sense solution to addressing that concern.

**You must bring your current CMSA card showing you area level 2 or higher to complete the application.** New shooters and Level 1 shooters must practice with a yellow card holder and should take direction from that person regarding safety.

Please note that we are the only User Group of the 342 at Ben Avery to have such a simple and unsupervised system. All other ranges have much tougher requirements. As AGFD develops confidence in our ability to practice safely and follow rules, we can ask for even more lenient procedures.

### **Two people required to ride in the Arena**

It is also required that **at least 2 people be present before any riding is done.** That is necessary to ensure help can be called if someone is injured. **If you are a level one or a lone shooter and want to schedule a partner or an upper level shooter to meet you at the facility, email Robert Morris** and he will help you to coordinate with another shooter ([Click for Link](#))

### **Pay Fees before riding**

**\*\*Note\*\* You must pay fee before you practice.** After paying at the main range cashier's office you are given a receipt. Please be sure to **display that on your truck dashboard.** Range personnel check the trucks to confirm everyone has paid. Each rider in the arena must pay the fee.

The fees offset the considerable expense in running the Mounted Shooting Center. Further, fees offset the considerable money the AGFD is spending to build new facilities.

Building the range is a long range project. Already AGFD has graded the site, run underground pipe for water and sewer, provided grading tractors, dust control Water, Diesel, and many more benefits. The more fees generated, the faster we can get an all weather cover!
